myDocuments released!

MOApp Software Manufactory has crafted and just launched a new software program on the market: myDocuments.

myDocuments is a clear program, crafted with love to detail, for grouping and finding documents and files. Even with Spotlight and the like it is easy to loose overview of all the documents you need for a project or a client - out of sight out of mind.

With myDocuments it is very easy to group your documents by client or project, to tag them and add comments. myDocuments can be used in menu bar mode - always with you never in your way. It displays a quick look of every document. Used documents can be automatically added to preselected groups. You can turn every group into a zip-archiv including a ReadMe file with additional information and a listing of all files included in the archiv (this is comparable to bundles in InDesign). In addition you can transfer any document directly to a ftp server.

myDocuments is a portable application, which can be used from a thumb drive. Thus you have all your documents in sync across numerous Macs with a USB stick, an iDisk or Dropbox.

You can test myDocuments out in the demo version without any limitations by clicking on www.myownapp.com. myDocuments is available at a reasonable price of 12 EURO. myDocuments is compatible with the Mac OS X 10.5.6 or higher.
