mySlips released!

Outlining the easy way!

MOApp Software Manufactory has crafted and just launched a new software program on the market: mySlips.

In most cases we do not need a full featured outline application to make a list, write down todos or simply track our notes. All we need is a simple slip...

mySlips is text driven - This way you can share all your slips very easily with others - you can easily include (and import) text and text documents without thinking about compatibility or reading a manual from a cluttered outliner. Just open mySlips and begin to type or let mySlips help you to outline your thoughts. mySlips can be used as a menu bar application and you can apply a Global Hotkey to access your slips with one key stroke. mySlips is pure text. Use it like any other word processor. Import and export text files to share your slips, todo-list, notes or meeting protocols with others regardless whether they use mySlips. Work even with Windows users without any hassle...

mySlips is a portable application, which can be used from a thumb drive. Thus you have all your slips, notes and lists in sync across numerous Macs with a USB stick, an iDisk or Dropbox.

You can test mySlips out in the demo version without any limitations by clicking on www.myownapp.com. mySlips is available at a reasonable price of 9 EURO. mySlips is compatible with the Mac OS X 10.5.7 or higher.
