myTexts released!

MOApp Software Manufactory has crafted and just launched a new software program on the market: myTexts.

No distraction. Just text. Pure creativity.

“Less is more,” as minimalist architect Mies van der Rohe says. Not only is this aphorism true in architecture, it’s true in writing as well. Enter myTexts, software specifically designed with you, the writer, in mind.

Unlike most word processors, myTexts stands apart from the rest with its simple to use user-friendly interface. Without the burdens of superfluous features common in other softwares, myTexts helps you get more meaning out of your words with less distraction. With myTexts, you don’t need to worry about the glitz and glamour of eye-candy filling your screen, meaning less crashes, less distractions, and less troubles; myTexts’ integrated automated environment helps you focus almost automatically on writing. Simply put, you don’t have to worry about pesky pests like windows, buttons or formats. No mess, no fuss. myTexts truly turns your Mac into a supercharged typewriter. Having trouble maintaining and locating your writings? With myTexts, there’s no need for you to worry about your documents, text files, backups, or how to regain them - myTexts takes care of it all for you! All of this is done in a self-explanatory and user-friendly way. myTexts saves your writing in the background and creates a backup at every start-up if you wish. All of your writings are just one click away at the left-hand side menu and are completely searchable. For your convenience, myTexts allows you to add tags to your documents, which, in turn, can be added to your Spotlight searches as well; thus, you will never again lose or misplace another text document. myTexts can be customized to fit your personal needs. Fonts, size, space, color or line spacing, myTexts serves to support you and your creativity.

No man is an island - not even the best poet. Since we write to be widely read and understood, myTexts multi-format file support makes it easy to exchange files with the outside world. myTexts inherently has read/write support to common and prevalent file formats like txt, rft, doc, docx, html, schreiben, odt and xml.

You can test myTexts out in the demo version without any limitations by clicking on [www.myownapp.com](http://www.myownapp.com). myTexts is available at a reasonable price of 12 EURO. myTexts is compatible with the Mac OS X 10.5.7 or higher.
