myWeblog 1.0 released!

MOApp Software Manufactory has crafted and just launched a brandnew software program on the market: myWeblog.

myWeblog is an offline weblog client for WordPress and other blogging technology that makes use of the MetaWeblog API. In contrast to the two other weblog client programs available for the Mac, myWeblog is precisely dovetailed and adapted to as well as specifically written for WordPress and its users. Other systematically aligned versions will soon be launched on the market, too - like versions for Blogger and ExpressionEngine, just to name a few.

myWeblog has been developed in collaboration with long- time WordPress users from all corners of the globe. It fulfills their needs and specific requirements seamlessly. In this way, functions like the hassle-free handling of custom fields are intuitively interlinked automatically, and there is no longer any need to use the WYSIWYG mode that never really worked anyway. Another new function offered is the integration of an easy-to-use HTML editor with familiar features like syntax coloring and line count. And all of the most important HTML tags for WordPress can be added with just one single mouse click, too. Professional bloggers will really appreciate self-created templates for continually recurring tasks and articles as well as the integrated web browser with bookmarks. myWeblog also comes with a wide range of import and export formats.

myWeblog is a portable application, which can be used from a thumb drive. And last but not least, you can sync your articles across numerous Macs with a USB stick, an iDisk or Dropbox.

You can test myWeblog out in the demo version without any limitations by clicking on www.myownapp.com. myWeblog is available at a reasonable price of 14 EURO. myWeblog is compatible with the Mac OS X 10.5.6 or higher.
