

The cute clipboard manager with long-term memory.

myClippings is designed for ease-of-use and most important of all: speed! It won't store yesterdays breakfast toast – but the much more useful remaining 99 percent.

Words, Phrases, Numbers, Paragraphs and Texts...

It won't slow down, hang or crash. Even with thousands of stored clippings and best of all – you are free to archive often needed clippings and also grouping them is a no-brainer.

You can paste a recently used clipping into an active window, view or field with two (three) simple steps and in less than a second. If you like you can also re-use your clippings by drag-and-drop and they can also be printed and exported.

myClippings is designed to run in the background for days, weeks and month without using much system resources – including old G4 machines running Tiger.

If enabled myClippings will automatically auto-save its changes. You might forget to pay your utility bill, but your clippings are save! myClippings also supports the export and import of your entire archive as a single file.

First Steps

- Setup behavior in Preferences
 - > Hotkey (global shortcut) to fast activate app
 - > First selection when activated (search, latest item etc.)
 - > Number of 'remembered' clippings
- myClippings is designed to work best without mouse
 - > Select desired item (cmd+Arrows) and insert it (cmd+return)
 - > Search item (cmd+alt+F)
 - > Add item to archive (cmd+shift+N)
 - > Copy item to clipboard (cmd+alt+C)
 - > Switch views (cmd+1 | cmd+2)
 - > Select group (cmd+alt+G)
 - > New archive item (cmd+N)
- Drag-and-drop
 - > clippings | archive items can be re-used by drag-and-drop
 - > auto-hiding of window can be disabled (at times)
- Export and import entire archive
 - > Menu (File → Archive Data → Export)

Support

I love to create small, focused and easy-to-use software. This includes extensive, friendly, and (most of all) quick support. If you have any questions, wishes, suggestions or otherwise unspecified comments/requirements, feel free to contact me.

- Every application comes with a feedback tool included. Access it by using Menu > Help > Provide Feedback.
- Please send your emails to info@myownapp.com
- Or use the contact form at my website: <http://www.myownapp.com>
- Or twitter me: <http://www.twitter.com/moapp>
