

mySlips

Outlining the easy way!

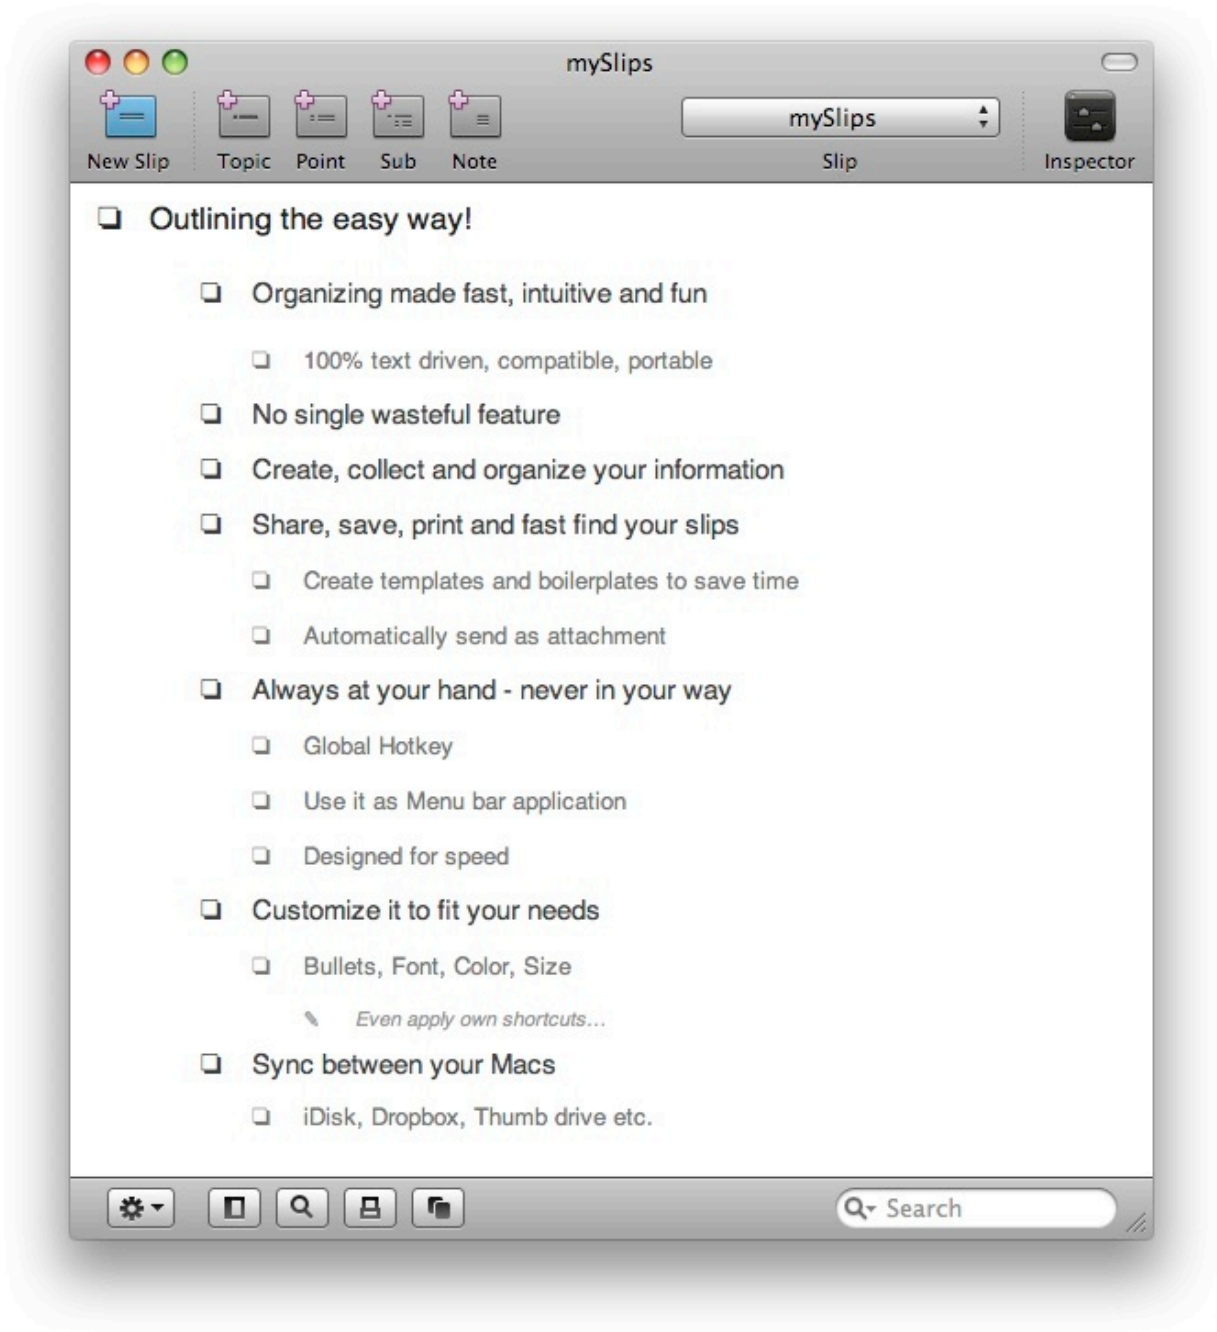

Made with [myManuals](#)

Getting started

Short Introduction

1. Create new slip by pressing cmd+shift+N or use File > New Slip
2. Create new topic by pressing control+return or use File > New Topic
3. Create new point by pressing shit+cmd+return or use File > New Point
4. Create new subpoint by pressing alt+cmd+return or use File > New Subpoint
5. Print slip by pressing cmd+P or use File > Print

Main view

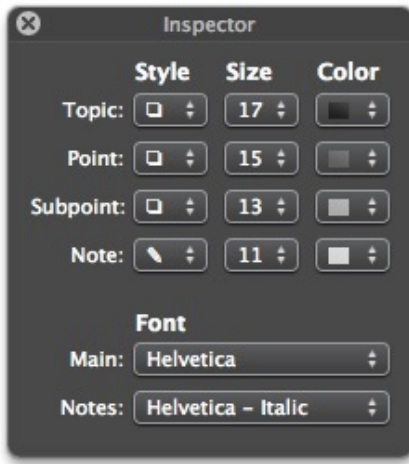

In most cases we do not need a full featured outline application to make a list, write down todos or simply track our notes. All we need is a simple slip...

mySlips is text driven - This way you can share all your slips very easily with others - you can easily include (and import) text and text documents without thinking about compatibility or reading a manual from a cluttered outliner.

Just open mySlips and begin to type or let mySlips help you to outline your thoughts.

mySlips can be used as a menu bar application and you can apply a Global Hotkey to access your slips with one key stroke.

Customization

Inspector

You are free to customize the bullet style, the font and the font size to fit your individual needs. In addition you can apply your own shortcuts for topics, points, subpoints etc. - just overwrite the menu items under 'Help' in the System Preferences (Keyboard).

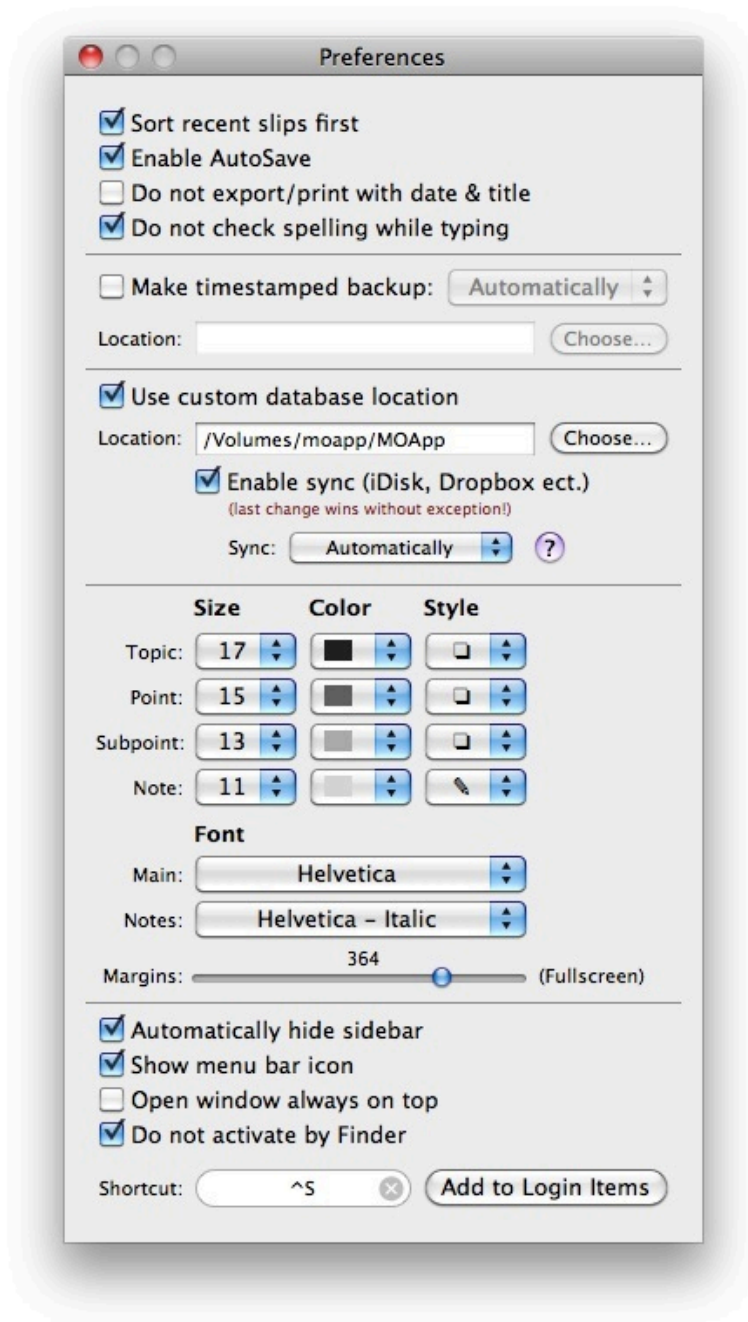

100% Text

TextView menu

mySlips is pure text. Use it like any other word processor. Import and export text files to share your slips, todo-list, notes or meeting protocols with others regardless whether they use mySlips. Work even with Windows users without any hassle...

100% Portable

Preferences

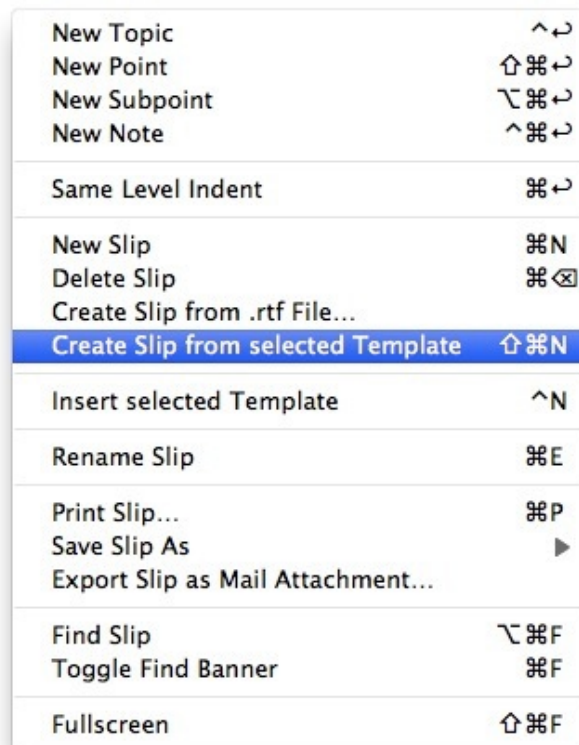

If you own more than one Mac or you need to switch between your working and your private Mac mySlips will help you to stay 'in sync'. You can use mySlips as a portable application: just enable 'Custom Database Location' in Preferences and run it from a thumb drive or a NAS. Or just put your data on your iDisk, enable the "iDisk sync" and the "mySlips sync" and you have all your important data always with you.

Notice

If sync is enabled - the last change will win without exception!

Templates

Menu

We often need a list for recurring tasks, situations.
Why always start them from scratch?
Just create a template from a slip and you're done.
If you need such a template - it is only one shortcut or click away.
You may also create boilerplates for later use.

Drag and Drop

Sometimes it is faster to use the mouse (or Wacom pen) instead of the keyboard .

You can easily drag and drop templates and even whole slips to any open application or window
- for example Mail, Pages or Word.

MOApp Software Manufactory is a state-of-the-art,
SME software architect headquartered in Mainz, Germany.

MOApp was brought to life by me, Michael Göbel. I have an unrelenting passion
for crafting small- scale things with a super sleek, minimalist design.

I believe that a software program should be as easy-to-handle as possible
and that it should always only focus on solving one job seamlessly.
In the process, the task at hand must be resolved as efficiently as possible and ideally,
users will not even need to pick up a manual to read the instructions ...

MOApp Software is primarily tailored to private households,
freelancers, independent contractors and self-employed people.
Today, it provides more than twenty software products for highly diverse segments.
Not only do my programs receive top-notch ratings from MacUpdate and comparable sources,
but they are also continuously highly recommended by apple.com as a Staff Pick and Featured Download.
